DIRECTIONS

PRODUCT DATA

1. Before applying floor finish, make sure that the floor surface is properly prepared. If the floor has been stripped, all residual stripper should be removed and the pH of the floor should be returned to neutral (6.5-7.5).

2. Always apply thin coats using a clean mop. It is important to pass the mop head in a figure 8 pattern to ensure that all areas are thoroughly covered.

3. Allow floor finish to dry sufficiently before walking on it or applying additional coats. For standard conditions, allow at least 30 minutes. For thorough drying in poor ventilation areas, dry times may be extended.

4. Repeat steps two and three for additional coats.
